19. Conclusion

1. Executive Summary

Ernekka Limited needs one website that does three jobs without feeling like three companies stapled together: prove the firm is real and competent, explain each division in plain terms, and make it effortless for a prospect to start a conversation. The benchmark research below shows that Nigerian sites in all three sectors tend to fall short on the same things: weak or missing contact paths, placeholder statistics, no privacy notice, and thin trust signals, so a modest, well-executed site can outperform larger competitors on the fundamentals.

Two of Ernekka's divisions have the potential to earn income outside Nigeria: Real Estate serves diaspora investors buying property at home from abroad. Media is beginning to earn some income from small businesses overseas, chiefly in Canada, and the board has approved a plan to grow that business deliberately. These are not one audience and they cannot be served by one page.

The recommended solution is a 14–15 page, mobile-first brochure site with a division-led homepage, one page per division, two dedicated overseas pages sitting beneath their parent divisions, an About page carrying the team and the RC number, an Insights section, and a Contact page built around WhatsApp for Nigeria and scheduled calls for everyone else. It should pass Google's Core Web Vitals on mobile, comply with Nigeria's data-protection rules and with the privacy rules of the countries our overseas enquiries come from, and be built on a mainstream platform that Ernekka's in-house team can update itself.

2. This Revision

This revision emphsizes the following:

Change	Reason
Pages for Diaspora Investors, and Services for Overseas Businesses	The two overseas audiences want opposite things. A single diaspora tab would satisfy neither.
Media division buyers described to include small businesses overseas	The first edition described a wholly Nigerian buyer. That is not what the division actually sells.
Overseas framed as global, not just one continent	Canada is where the business started and where the growth plan is focused, but the offer is not Canada-specific. Naming it global keeps the door open at no cost.
Scheduled video calls added as a conversion path	WhatsApp-first is right for Nigeria and wrong for an overseas professional who will not open WhatsApp to a foreign number.
ernekka.com is the primary domain	The .com.ng address shall not be the primary domain as it quietly signals Nigeria-only to an overseas buyer.
CDN with North American and European edge locations	Site must optimise for Nigerian networks but not limited to Nigerian visitors.
Analytics segmented by country	Without it, the new pages cannot be judged and will quietly rot.
Compliance extended beyond the NDPA	Once we collect enquiries from Canada, the UK or the EU, their privacy rules may apply; and overseas buyers ask where their data sits before they buy.
Division of work between this site and campaign pages	Although site is being built by in-house teams, the boundary must be written down or the work will be done twice.

3. Company Snapshot and the Core Design Challenge

Division	Services described by Ernekka	Likely buyer	What the buyer needs from the site
Real Estate	Advisory, development and related services	Individual buyers, landowners, developers — and, as a distinct group with distinct needs, diaspora investors buying from abroad who cannot inspect a property themselves	Proof of legitimacy, clear process, verifiable titles, easy enquiry. Diaspora investors additionally need evidence they can check from a distance: written title reports, recorded inspections, a named person, and safe payment arrangements
Business Consultancy	Professional advisory, diagnostics, strategy, operations, bookkeeping, tax services	SME owners, founders, family businesses, NGOs	Clear service menu, credentials, a low-friction first consultation
Media	Planning and strategy, content creation, campaign management, monitoring and reporting — and a bundled monthly service for small businesses overseas covering website, content, business systems and records support	Two groups. In Nigeria: marketing managers, SME owners, agencies, public bodies. Overseas: small businesses, chiefly in Canada at present, buying one bundled monthly service	Nigerian buyers need evidence of creative quality, a portfolio and a defined process. Overseas buyers need proof that an offshore firm can deliver reliably every month, clear pricing, and a way to book a conversation

The central challenge is architecture, not decoration. A visitor who arrives for tax services must not be confused by property listings, and a property investor should not have to wade through consulting copy. The site should therefore treat Ernekka as a parent brand with three clearly signposted practice areas, a pattern used well by diversified Nigerian groups.

The site should show the two divisions serving buyers in two places at once, and those buyers want different evidence, different prices and different ways of making contact. The answer is not a separate site or a separate brand. It is one clearly marked page beneath each affected division, using the same template as every other page.

4. The Two Overseas Audiences

These two groups are not just "the diaspora". They should not be. They want opposite things, and the page that serves one would repel the other. See below:

	Audience A: the diaspora property investor	Audience B: the overseas business buying media services
Who they are	A Nigerian abroad — in Toronto, London, Houston — considering buying land or a home in Nigeria	A small business owner abroad, at present chiefly in Canada, buying a monthly service. Increasingly not Nigerian at all
Which way the money flows	Into Nigeria	Out of their country to us
Their dominant worry	Fraud. They cannot visit the site themselves and they have heard the stories	Reliability. Can an offshore firm actually deliver every month, and who answers when something goes wrong?
What convinces them	Written title verification, recorded inspections, a named person with a face, staged payments, official account names	Client stories, plain pricing, a named point of contact, a clear description of how the work gets done

	Audience A: the diaspora property investor	Audience B: the overseas business buying media services
How they want to make contact	WhatsApp or email to a named relationship manager, at a time that suits their zone	A scheduled video call booked from a calendar link
Which division serves them	Real Estate	Media

On the choice of "overseas" rather than "Canadian". Our present overseas clients are Canadian and our approved growth plan is focused on Canada. But nothing in the bundled monthly service is Canada-specific, and a page headed "Services for Canadian Businesses" would turn away an enquiry from London or Houston for no reason. The page should be written as a global offer and may mention Canada as where the work began and where most of our clients are today. That costs nothing and keeps every door open.

5. Market Context: Who Will Visit and How

Nigeria is reported to have reached 109 million internet users in October 2025 at 45.5 per cent penetration, 165 million mobile connections, and a median mobile download speed of 44.96 Mbps at the end of 2025. NCC data put mobile internet users at 162.6 million by mid-2026, while fixed fibre remained tiny at 319,735 FTTx subscribers against 156.4 million mobile internet subscriptions in June 2026.

Four implications follow for Ernekka's site. The first three concern Nigerian visitors and are unchanged from the first edition. The fourth is new.

a. **Mobile is the primary device.** Nigeria's two largest local property portals receive 79 and 84 per cent of their visits from mobile. Android holds more than 87 per cent of mobile operating system share in Nigeria, so testing should prioritise mid-range Android devices on Chrome.

b. **Bandwidth is uneven.** Real-world Nigerian connections may deliver only 50 to 400 kbps in places. A 5 MB page takes about 40 seconds on 2G while a 500 KB page takes about four seconds, so initial page assets should stay under roughly 200 KB where possible, with images lazy-loaded and served as WebP or AVIF.

c. **WhatsApp is the conversation channel in Nigeria.** WhatsApp is used by 96.5 per cent of Nigerian internet users aged 16 and over, the highest of any platform, and more than 80 per cent of adults in a Sub-Saharan African study message a business at least weekly, mostly preferring messaging to email or calls. LinkedIn reaches only 31.3 per cent of Nigerian social media users, though it remains relevant for the consultancy audience.

d. **Overseas visitors behave differently, and there will be more of them.** They arrive on faster connections and often on desktop. They are far more likely to read a page in full before making contact, because they cannot simply drop in to an office. And they will not open WhatsApp to a foreign number as a first step; a professional abroad books a call. The site must serve both behaviours without cluttering either path.

The practical conclusion is that for the Nigerian market the website's job is to establish credibility and route visitors into a WhatsApp or form conversation quickly. For overseas visitors its job is to survive a longer, more sceptical reading and then offer a calendar.

6. Benchmark Review: Nigerian Sites in Each Sector

Twelve Nigerian company homepages were reviewed as design benchmarks. The full sector tables are retained from the first edition and are unchanged; what follows is the summary of what they teach, with one addition.

Real estate benchmarks

Company	Strengths to borrow	Gaps to avoid
Mixta Africa	A single, confident positioning line. Properties in Lagos, Port Harcourt and Abuja presented through an Explore section with property-type filters. Publishes a customer-commitment page with contact hours and phone lines	The homepage itself shows no trust statistics or contact details in the first view
LandWey	Communities presented as cards with status labels. Featured properties. Phone, email and head-office address visible. Publishes a privacy policy. An FAQ page warns buyers to pay only into named official accounts	The builder-partners section names no partners. No contact form or WhatsApp link on the homepage
Northcourt	Advisory positioning, a research section with downloadable reports, and a team page — the right model for Ernekka's advisory offer	No contact details, no services breakdown, no footer legal information on the homepage

Anti-fraud trust is a sector-specific requirement. Common Nigerian property frauds include fake Certificates of Occupancy, forged Governor's Consent and survey plans, and double allocation, and buyers are explicitly warned that a developer having a nice website is not due diligence. This matters most to the audience that cannot walk the land. Our Real Estate page should state its title-verification process, name its official payment accounts, and show the RC number; the diaspora page described in Section 10 goes considerably further.

Business consultancy benchmarks

Company	Strengths to borrow	Gaps to avoid
Phillips Consulting	A sharp headline, a free-consultation call to action, email, phone and street address in the header and footer, and downloadable resources such as a training calendar and a talent report	No client logos, testimonials or numbers to substantiate its reputation claims
Kreston Pedabo	Clean six-item navigation. Services grouped into four clear categories. Monthly newsletters and topical insights. Borrows credibility from its international network	The homepage shows no direct contact details
SIAO Partners	States years of experience and personnel numbers. Lists sectors served. An active blog on tax reform	Counter widgets display zeroes because the animation script failed — a common template error that damages credibility. No contact details on the homepage

Guidance for consulting sites recommends six pages at launch: a homepage with a specific positioning statement, individual service pages, case studies with named outcomes, a team page with credential depth, a blog, and a contact or discovery-call page. The same guidance cites Stanford research finding that three-quarters of people judge a company's credibility primarily on website design.

Media and marketing benchmarks

Company	Strengths to borrow	Gaps to avoid
Wild Fusion	A brand-growth headline, named client campaigns, and an insights section	No contact details or call to action on the homepage
X3M Ideas	A work-led homepage built from campaign case studies, with awards as trust signals and office contacts in the footer	No privacy policy and no primary call to action
Anakle	The best-structured of the set: four service groups each with named sub-services, real statistics, named testimonials, a contact form with budget and timeframe selectors, a newsletter, a careers link, and a copyright range showing longevity	No phone or WhatsApp. No privacy policy

Diversified-group benchmarks

Company	Strengths to borrow	Gaps to avoid
LMI Integrated Services	Displays its RC number prominently. Six division cards each with its own tagline. A featured project with a status label. A values list	Counters showing zero years of experience. No contact details on the homepage
TBE Group	Divisions presented as named sub-brands with one-line scopes, and a named client testimonial	No contact details, no insights, no legal footer
Bonitas Group	An address with a map reference	Nine business lines described in undifferentiated text blocks, with no calls to action, statistics or clients — the everything-to-everyone problem Ernekka must avoid

What the benchmarks teach

- Almost none of the twelve sites put a phone number, WhatsApp link or form in the first screen. Ernekka can win on this alone.
- Only one of the reviewed homepages exposed a privacy policy, and none showed a cookie-consent notice, despite Nigerian rules requiring one.
- Broken counter widgets showing zeroes appeared on two sites. Ernekka should use static, verifiable figures or none at all.
- The strongest sites share a pattern: tight navigation, services grouped into three to six cards, real numbers, and named people.
- Not one of the twelve addressed an overseas buyer at all; no time zones, no international dialling format, no booking link, no statement of where client data is held. For a country whose diaspora sends home tens of billions of dollars a year, this is a conspicuous gap, and the second place Ernekka can win cheaply.

7. Performance and Conversion Benchmarks

Speed

Google's Core Web Vitals thresholds are a Largest Contentful Paint of 2.5 seconds or less, an Interaction to Next Paint of 200 milliseconds or less, and a Cumulative Layout Shift of 0.1 or less, measured at the 75th percentile of real Chrome users over a rolling 28-day window. In the May 2026 data release only 55.9 per cent of all origins passed all three, and mobile home pages passed at just 45 per cent. Ernekka's target should be to pass all three on mobile at launch, which would place it in the top half of the web and ahead of most Nigerian SME sites.

Platform choice affects this materially. Pass rates in late 2025 archive data were 84.87 per cent for Duda, 74.86 per cent for Wix, 70.39 per cent for Squarespace, 79 per cent desktop and 67 per cent mobile for Webflow, and 46.28 per cent for WordPress. WordPress can pass comfortably, but only with disciplined theme and plugin choices, which should be written into the build specification our in-house team works to.

These thresholds are measured from where the visitor actually is. A site hosted in or near Nigeria and served without a content delivery network will fail them for a visitor in Toronto or London, however well it performs in Lagos. The CDN requirement in Section 13 is what makes this target achievable for both audiences.

Conversion

For professional services, visitor-to-enquiry conversion benchmarks are 2 to 4 per cent, enquiry-to-proposal 30 to 50 per cent, and proposal-to-close 40 to 60 per cent. A website conversion rate below 1 per cent usually signals a traffic-quality or messaging problem. The median business-to-business website conversion rate across sectors is about 2.9 per cent. For Ernekka, a sensible first-year target is 2 to 3 per cent of visitors starting a WhatsApp chat, submitting a form or booking a call, tracked per division and now also per country group.

8. Objectives and Success Metrics

Objective	Metric	Target (first 12 months)	Basis
Establish credibility	Visitors who reach About or a division page	40% of sessions or better	Stanford credibility finding
Generate enquiries	WhatsApp clicks, form submissions and bookings, divided by sessions	2–3%	Professional-services range of 2–4%
Work on mobile networks	Core Web Vitals, mobile, 75th percentile	LCP ≤ 2.5s, INP ≤ 200ms, CLS ≤ 0.1	Google thresholds
Be findable locally	Google Business Profile verified and linked; site indexed for Ernekka and core service terms	Complete within 30 days of launch	Local SEO practice
Stay compliant	Cookie consent, privacy policy, RC number displayed	100% at launch	NDPA/GAID and CAMA
Reach diaspora investors	Diaspora enquiries as a share of all Real Estate enquiries	20% or better by month 12	New page; no prior baseline, to be reviewed at month 6
Reach overseas businesses	Discovery calls booked from outside Nigeria	4 per month by month 12	Supports the approved media growth plan

The two new targets are first estimates, not commitments. There is no baseline for either, so both should be reviewed at month six and reset against what the site actually produces. What matters is that they are measured at all; an unmeasured page is an unmaintained page.

9. Proposed Site Architecture

Approximately 14 to 15 pages, all reachable within two clicks of the homepage.

Home
- Real Estate
  - Advisory (valuation, acquisition, due diligence, portfolio)
  - Development (projects, joint ventures)
  - **For Diaspora Investors**
  - Properties / Projects (optional listing module, Phase 2)
- Business Consultancy
  - Strategy & Advisory
  - Diagnostics & Operations
  - Bookkeeping & Tax
- Media
  - Planning & Strategy
  - Content Creation
  - Campaign Management
  - Monitoring & Reporting
  - **Services for Overseas Businesses**
- About
  - Our Story & Values
  - Leadership / Team
  - Company Information (RC number, registered office)
- Insights (blog, downloadable guides)
- Contact (WhatsApp, booking link, form, map, phone, email)
- Privacy Policy & Cookie Notice
- Terms of Use

Each division page can be launched as a single long page with anchored sections rather than several sub-pages, keeping the initial build to about ten pages. Sub-pages can be split out later once there is enough content to justify them.

The two new pages are the exception. They should be real pages with their own addresses from the first day, not anchored sections, for three reasons: they must be findable by search on their own terms; they must be linkable from campaign material and from conversations; and they carry different calls to action from their parent pages.

Navigation is not duplicated. Neither new page appears in the top-level menu. Each is reached from its parent division page and from the footer. The top navigation stays at six items plus a highlighted Contact button.

10. Page-by-Page Content Requirements

Homepage

- **Hero:** one sentence naming Ernekka, what it does and for whom — for example, *"Ernekka helps businesses and property owners make better decisions across real estate, business*

advisory and media, in Nigeria and abroad." Two buttons: "Chat on WhatsApp" and "Explore our services."

- **Trust strip** directly under the hero: RC number, year established, number of clients or projects using real figures only, and any professional memberships. Credentials belong in the first scroll, not on the About page.
- **Three division cards** with a one-line promise and a "Learn more" link each.
- A single line in the trust strip or immediately below it noting that Ernekka serves clients in Nigeria and abroad, linking to the two overseas pages. One line, not a section. It tells an overseas visitor they are in the right place without disturbing the Nigerian visitor's path.
- **"How we work"** three-step process (Talk, Diagnose, Deliver) to reassure first-time buyers of services.
- **Two or three named testimonials** or client logos, with permission.
- **Latest two Insights posts.**
- **Footer:** address, phone in international format, email, WhatsApp, social links, RC number, privacy and cookie links, copyright year, and links to both overseas pages.

Division pages (Real Estate, Consultancy, Media)

Each follows the same template so the site feels coherent: a one-paragraph positioning statement; who the service is for; a list of services with two-line descriptions; a "what you get" deliverables box; a short process; one mini case study or example engagement covering client type, challenge, action and result; a division-specific FAQ; and a call to action that pre-fills the WhatsApp message with the division name.

Real Estate must add a "How we protect buyers" block covering title verification, site inspection and official payment accounts, and must link prominently to the diaspora page. Media should add a portfolio grid with images and short video clips kept under 2 MB each or embedded from YouTube, and must link prominently to the overseas services page. Consultancy should add a downloadable "Business Health Check" one-pager as a lead magnet.

Real Estate → For Diaspora Investors

This page exists to answer one question: how can somebody who cannot stand on the land trust us with their money? Everything on it should be evidence a person abroad can verify or receive in writing.

- **Independent title verification.** What we check — Certificate of Occupancy, Governor's Consent, survey plan, encumbrances — who carries out the search, and the written report the client receives before any money moves.
- **Recorded video site inspections.** A dated walkthrough of the actual land or property, recorded for the client, so the buyer sees what they are buying. This single item probably does more work than any other on the page.

- **A named relationship manager.** A real photograph, a name, a direct line in international format, an email address, and the hours they are reachable in the client's time zone. Not a general enquiries address.
- **Staged or escrow payments.** What is paid when, and what the client receives at each stage before the next payment falls due.
- **Official payment accounts stated plainly.** The exact account names money should be sent to, with a clear warning that we will never ask for payment to any other account. Fraudsters impersonating agents is a known pattern; saying so openly builds more trust than it costs.
- **Documented handover.** What documents the client ends up holding, and when.
- **A diaspora FAQ** answering the questions these buyers actually ask: How do I pay from abroad? Do I have to travel? Who inspects on my behalf? What happens if the title turns out to be bad? How long does the whole process take? Can a relative act for me?
- **Calls to action:** book a call with the relationship manager; email; WhatsApp offered but not made the only route.

Media → Services for Overseas Businesses

This page exists to answer a different question: can a firm operating from Nigeria deliver reliably for a small business abroad, month after month? It should be plain, concrete and unembarrassed about where the work is done.

- **The bundled monthly service, described plainly:** website, content, business systems and records support, delivered as one accountable relationship rather than a menu of separate items.
- **Who it is for.** The client groups the growth plan names, described as trades rather than as a market segment — the people who read this page should recognise themselves in it.
- **The three pricing tiers,** with what each includes. Published prices are a competitive advantage here: they filter out the wrong enquiries and they signal confidence.
- **One or two client stories** with the client's permission: what the business looked like before, what we did, what changed.
- **How the work gets done.** Who does it, how often the client hears from us, what happens when something goes wrong, and where their information is held. An overseas buyer will ask this; answering it before they do is worth more than any design flourish.
- **Calls to action:** book a discovery call from a calendar link, as the primary route; email as the secondary. No WhatsApp button on this page.

About

Story in 150 to 250 words, values, leadership profiles with real photographs, credentials and prior roles, and a Company Information block stating the registered name, RC number and registered office address. Overseas visitors read this page more carefully than Nigerian visitors do; it is where they decide whether we are a real company.

Insights

A simple blog with categories matching the three divisions. Two or three posts per quarter is enough to signal activity. Topics such as Nigeria's tax reform, Lagos land-title checks and social-media reporting templates serve all three audiences; one or two posts a year written directly for diaspora buyers would support the new page.

Contact

WhatsApp button first for Nigerian visitors, then a four-field form covering name, phone or email, division of interest and message, the phone number as a tap-to-call link in international format, email, office address with an embedded map, and business hours.

Add a booking link for a scheduled video call, office hours stated in three time zones — Lagos, London and Toronto — and a stated callback window for overseas enquiries. Confirm that messages will be answered within one business day and honour it. A missed callback to somebody five time zones away is much harder to recover from than a missed WhatsApp message across town.

11. Functional Requirements

Requirement	Detail
Mobile-first responsive layout	Designed for 360–412 px Android screens first, with large tap targets and a sticky WhatsApp button on mobile. The sticky WhatsApp button should not appear on the overseas services page.
WhatsApp click-to-chat	Links with pre-filled, division-specific messages.
[NEW] Call booking	A calendar booking tool embedded on the two new pages and on Contact, showing available times in the visitor's own time zone and issuing a video-call link on confirmation.
Enquiry forms	Spam-protected, routed to a monitored shared inbox, with a thank-you page that fires an analytics event.
Content management	Non-technical staff can edit text, add Insights posts, portfolio items and, later, property listings.
Analytics	Google Analytics 4 and Search Console, loaded only after cookie consent, with conversion events for WhatsApp clicks, calls, form submissions and bookings.
[NEW] Country segmentation	Analytics configured so that Nigerian, diaspora and other overseas traffic can be reported separately, with the two new pages and the booking event tracked as their own funnel.
[NEW] Content delivery network	A CDN with North American and European edge locations, so that overseas visitors are served from near where they are.
Newsletter capture	Optional, Phase 2.
Payments	Not required at launch. Payment links and invoicing tools can be used for consultancy fees without an e-commerce build.
Property listings module	Phase 2, and only if Ernekka will list properties for sale regularly.
Search engine basics	Clean URLs, page titles and descriptions, schema markup for Organization and LocalBusiness, and an XML sitemap.
Security	HTTPS everywhere, daily backups, and two-factor login for the content management system.

12. Design Direction

- **Tone:** calm, precise and confident — closer to a professional advisory firm than to a property-sales landing page. Plain English, short sentences, no jargon or superlatives that cannot be backed with evidence.
- **Colour:** one primary brand colour and a warm neutral background, with a restrained accent per division used only in cards, icons and section markers so the parent brand stays dominant. This must be reconciled with any existing Ernekka logo and brochure colours before design begins.
- **Typography:** one modern sans-serif family for headings and body, self-hosted to avoid an extra DNS lookup on high-latency connections, minimum 16 px body text on mobile, generous line height.
- **Imagery:** real photographs of the team, offices and Nigerian projects rather than generic stock, consistently edited, every image compressed and served in WebP or AVIF, which compress 25 to 35 per cent better than JPEG.
- **Layout:** a maximum of six top-level navigation items plus a highlighted Contact button, consistent section rhythm, no auto-playing video in the hero, no animated counters.
- **Accessibility:** conform to WCAG 2.2 Level AA, covering colour contrast, keyboard navigation, focus visibility and form labels.
- The two new pages use the existing division template without modification. No new components, no separate visual identity, no microsite. The only differences are the content and the call-to-action block. This is what keeps the addition to roughly ten per cent of the build rather than a second project.

13. Technical and Platform Recommendation

Option	Fit for Ernekka	Notes
WordPress (managed hosting, lightweight theme)	Recommended if Ernekka wants full ownership, the widest in-house and local skill pool, and a future listings module	Largest Nigerian developer ecosystem. A Core Web Vitals pass rate of only 46.28 per cent across all WordPress sites means theme and plugin discipline must be a written build standard, not a preference.
Webflow	Recommended if design polish and low maintenance matter more than skill availability	Strong performance and a visual CMS, but fewer Nigerian specialists and subscription billed in US dollars.
Wix / Squarespace	Acceptable for a very fast, low-budget launch	Highest out-of-the-box Core Web Vitals pass rates, but limited flexibility for a listings module later.

Domain

Register ernekka.com, ernekka.com.ng and ideally ernekka.ng. Make ernekka.com the primary address, with the others redirecting to it. The first edition had this the other way round. A .com.ng address quietly signals "Nigeria only" to an overseas buyer, and the diaspora and overseas services pages are precisely where that signal does most damage. The .com.ng domain remains valuable and should be kept, but as a redirect rather than the home address.

Registry pricing is in the region of ₦6,450 a year for .com.ng and ₦13,975 for .ng including VAT, with WHOIS privacy provided at no cost on .ng domains; registrar retail prices vary, and .com runs around ₦17,500 to ₦24,000 a year. Professional email on the domain costs roughly ₦10,000 to ₦15,000 per user per year.

Content delivery and hosting

Whatever platform is chosen, the site must sit behind a content delivery network with North American and European edge locations as well as African ones. Without it, an overseas visitor waits on a round trip to Lagos before the first pixel appears, and the Core Web Vitals target in Section 8 cannot be met for that visitor. This is a small monthly cost and one of the highest-value items in this brief.

14. Compliance Requirements

Nigerian data protection and cookies

The Nigeria Data Protection Act 2023 is enforced by the Nigeria Data Protection Commission, and its General Application and Implementation Directive became operational on 19 September 2025. Cookie banners must appear in the first visible section of the page, explain which cookies are used and why, identify the organisation, explain how to withdraw consent, and offer explicit accept and reject choices. Pre-ticked boxes and implied consent by continued browsing are invalid, and analytics cookies require opt-in. Penalties can reach ₦10 million or 2 per cent of annual gross revenue, and the Commission issued compliance notices to more than 1,300 organisations in August 2025.

Ernekka's site therefore needs a compliant consent banner, a privacy policy covering the enquiry form and WhatsApp handling, and consent-gated analytics — none of which the benchmark sites reviewed had in place.

Visitors from other countries

Once the site collects enquiries from people in Canada, the United Kingdom or the European Union, those countries' privacy rules may also apply to how we handle their information. Three practical requirements follow:

1. The consent banner and privacy policy should be built to handle visitors from those jurisdictions, not only Nigerian visitors.
2. The privacy policy should state plainly where data is stored, who accesses it, and how long it is kept.
3. The same standard should be written into the build specification our in-house team works to, so it is treated as a requirement rather than a preference.

This is a commercial point as much as a legal one. Overseas buyers of the media service ask where their information sits before they buy. A confident, specific written answer on the site removes an objection before it is raised. A vague one invites it. We should take Nigerian legal advice on the foreign-jurisdiction question before launch rather than guess at it.

Company particulars

Section 729 of CAMA 2020 requires every company to display its name and registration number on its offices and on all business letters, notices, advertisements, official publications, invoices and receipts. Following a public notice dated 7 July 2026, the Corporate Affairs Commission began full enforcement on 1 August 2026 of the requirement that business letters carry the registered name, registration number, registered office address and directors' names. The rule does not expressly name websites, but showing the RC number and registered office in the footer and on the About page is inexpensive, aligns with the spirit of the law, and answers the fraud concern that hangs over Nigerian real estate — a concern felt most acutely by the diaspora buyer.

15. Division of Work: Corporate Site and Campaign Pages

Two pieces of work now touch the same audience, and both are being carried out by Ernekka's own in-house teams. The boundary between them must be written down before either begins, or the same message will be written twice, in two voices, and neither team will know which version is authoritative.

	This corporate site	Campaign landing pages
Built by	The in-house web team, to this brief	The in-house media team, under Amaka
Its job	Prove Ernekka is a real, substantial group that can be trusted with money and with a monthly relationship	Convert a specific visitor from a specific advert or referral into a booked call
How many pages	One overseas services page, global in tone	As many as there are client groups, each written for that group alone
Where it lives	ernekka.com	Wherever the media team's campaign tooling is best served
How they connect	Receives links from the campaign pages as proof of substance	Links back to this site's About and overseas services pages

Because both teams are ours, the coordination problem is manageable but not automatic. Two practical rules are proposed:

1. **One owner of the words.** The positioning statement, the description of the bundled service and the pricing tiers are written once, by the Growth Lead, and used unchanged by both teams. Where the corporate site and a campaign page describe the same thing differently, the Growth Lead's version stands.
2. **One owner of the site.** The corporate site has a single named custodian who approves every change to it, including changes the media team requests. A site edited by two teams without a custodian drifts within a quarter.

16. Content To Be Supplied By Ernekka

Content readiness is the most common cause of delay in Nigerian web projects. Before design starts, Ernekka should assemble:

1. Logo files in vector format, and any existing brand colours or brochure.

2. Approved company description, mission and values, in 150 to 250 words.
3. RC number, registered office, directors' names, and any professional registrations.
4. Service descriptions for each division, two to three lines per service.
5. Two or three case studies, one per division, anonymised or with permission.
6. Team photographs and 60 to 80 word biographies.
7. Three to five testimonials with names and titles, or client logos with permission.
8. Portfolio samples for Media: images, links, short clips.
9. Contact details, WhatsApp Business number, office hours and map location.
10. A diaspora client story — one investor who bought from abroad, with permission to tell it.
11. The title-verification process written out step by step, as it is actually carried out.
12. The overseas client stories already being prepared under the approved media growth plan.
13. The official payment account names for the diaspora page, approved for publication.

Items 10 to 13 gate the two new pages. If they are not ready, launch the rest of the site and hold the two pages back rather than publishing them with placeholders. An empty diaspora page does more harm than no diaspora page.

A content freeze date should be set before design begins.

17. What We Are Deliberately Not Building

To keep the site simple and the build honest, the following are excluded. Each has been considered and set aside on purpose, and any of them can be revisited in a later phase.

- A separate diaspora microsite or a second brand.
- A currency converter.
- Live chat.
- A property listings module in phase one.
- Any new design system, component library or visual identity for the overseas pages.

The two new pages reuse the existing template. On that basis the total build grows by perhaps ten per cent over the first edition.

18. Risks and Mitigations

Risk	Mitigation
Content delays stall the project	Use the checklist in Section 16 and set a content freeze date before design begins.
Three divisions dilute the message	Division-led homepage cards and a shared parent-brand positioning statement, with one primary call to action per page.
Slow load on Nigerian mobile networks	Core Web Vitals targets written into the build standard, image budgets, a lightweight theme, and a CDN.

Risk	Mitigation
[NEW] Slow load for overseas visitors	The CDN requirement in Section 13, with Core Web Vitals measured from North America as well as from Lagos before sign-off.
Regulatory exposure	Compliant cookie banner, privacy policy, RC number in the footer, consent-gated analytics, and provision for foreign visitors as set out in Section 14.
[NEW] The two new pages are launched incomplete	They are gated on items 10 to 13 of the content checklist. Hold them back rather than publish placeholders.
[NEW] The same message written twice by two in-house teams	The division of work and the two ownership rules in Section 15.
Site launches and is never updated	Assign an Insights owner, commit to two or three posts per quarter, and review statistics and testimonials quarterly.
[NEW] Overseas enquiries arrive and nobody answers in time	A stated callback window, hours published in three time zones, and the booking link routed to a named person who owns the response.
Enquiries go unanswered	Route the form and WhatsApp to a monitored business number, set a one-business-day response standard, and track it.

19. Conclusion

A simple site can be a decisive advantage for Ernekka precisely because the Nigerian benchmark set is weak on the basics: visible contact paths, verifiable trust signals, privacy compliance and mobile speed. Not one of the twelve sites reviewed addressed an overseas buyer at all, which makes the two new pages a second open goal rather than a complication.

This brief asks for a 14 to 15 page, mobile-first, division-led site with WhatsApp at the centre of the Nigerian enquiry journey and scheduled calls at the centre of the overseas one; static and truthful credibility markers; two dedicated overseas pages built from the existing template; and compliance with Nigerian disclosure and data-protection rules as well as with the privacy expectations of the countries our overseas enquiries will come from.

Two following are purposeful objectives: Two of Ernekka's three divisions already earn some money outside Nigeria, and a website that does not say so is describing a company we no longer are.
